Pantry Pal: what happens next

Six steps to finished user tests. Tick the boxes as you go. Anything technical is Christopher's job; just ask him.

1 The app is ready

WHO: CHRISTOPHER (NOTHING FOR YOU TO DO)

The new version is online. Christopher won't change it on testing days, so every tester sees the same app.

- [ ] Open Version A and Version B once, so you know what testers will see

2 The A/B test

WHO: THE WHOLE TEAM

Version A is the control, with no impact message.
Version B shows "You saved ~$## and ## lbs of food from going to the landfill" after food is used or a recipe is cooked. Everything else is the same.

Does impact feedback increase feelings of frugality, sustainability and accomplishment, and raise intention to use?

- [ ] Update the plan so Version A is the control and Version B has the message

3 Finish the test plan

WHO: YOU + TEAM

- [ ] Task 2 ends with cooking the recipe and updating the pantry, so testers reach the message
- [ ] Survey asks whether testers noticed any savings information
- [ ] Analysis equations include sustainability, and define Prototype and Impact_Feedback

4 Set up the tests

WHO: YOU (CHRISTOPHER GIVES YOU THE PICTURES)

- [ ] Assign each tester a direct Version A or Version B link, keeping the split even
- [ ] Get the new app pictures from Christopher and upload them to any UXtweak picture tests
- [ ] Try the recording setup once on the laptop you'll use

5 Try the new version first

WHO: YOU + ONE HELPER

This version changed since your pilots, so run through it once in each version.

- [ ] Version A: finish Task 1 and Task 2, and write down anything confusing
- [ ] Version B: same again, and confirm the message appears after updating the pantry
- [ ] Tell Christopher about anything that broke before the real tests

6 Run the real tests and write it up

WHO: YOU + TEAM

Test with your 30 people. Keep the app the same the whole time, so results are fair.

- [ ] Run the tests, splitting people evenly between Version A and Version B
- [ ] List the problems you saw, from worst to smallest
- [ ] Compare A and B on frugality, sustainability, accomplishment and intention to use

Choose a version	https://senahpomaikai.github.io/pantry-pal/
Version A (control)	https://senahpomaikai.github.io/pantry-pal/A/
Version B (impact message)	https://senahpomaikai.github.io/pantry-pal/B/

The capital A or B matters. Nothing a tester does is saved; refreshing the page starts fresh.
